EMAIL DRAFTS — VERIFY BEFORE SENDING

Outbound Email Sequence

Prospect: Northwind Trading Co.

SEQUENCE	STAGE	STEPS
PRO-OUT-014	Cold outreach	3 emails

Demonstration artifact generated with realistic placeholder data — not a real client engagement.

Outbound Email Sequence — Support Email Triage Pilot

A three-step prospecting cadence for an operations leader with a manual support-triage bottleneck. Drafts only — verify recipient and routing before sending. No fabricated metrics or client names.

Email 1 — Cold: Operations Bottleneck

Subject: Reducing manual triage on the support inbox

Send day 1.

Hi Dana,

Most support teams your size lose the first few hours of every ticket to manual sorting — someone reads each email, labels it, and forwards it on before anyone replies.

We build bounded agentic workflows that classify inbound support email, draft a grounded reply, and recommend a queue — with a person approving every customer-facing send. Evaluation-first, sandbox-only until it proves out.

Worth a 15-minute workflow review to see if one queue is a fit?

— Tim, CompleteTech LLC

Reply "no thanks" and I'll close the loop.

Email 2 — Follow-up: Workflow Map

Subject: Re: Reducing manual triage on the support inbox

Send day 4 if no reply.

Hi Dana,

Quick follow-up. If it helps, I can sketch a one-page map of how an agent would sit in front of your five support queues — where it drafts, where a human approves, and what gets logged for evaluation.

No build, no commitment — just the workflow on a page. Want me to send it?

— Tim

Email 3 — Breakup: Close the Loop

Subject: Close the loop?

Send day 9 if no reply.

Hi Dana,

I don't want to crowd your inbox. If triage isn't a priority this quarter, I'll step back and check in later.

If it is, a scoped 8-week pilot is the lowest-risk way to test it — measured against a labeled set before anything touches a customer. Just say the word.

— Tim
